Darya Brauner

Full Stack Developer · React · Next.js · TypeScript · Node.js · MongoDB · AI-assisted development

Ramat Yishai, Israel · +972-54-693-8681 · darya.tkch@gmail.com · linkedin.com/in/darya-brauner-b5a517285

Summary

Full stack developer who owns a production platform end to end: four services, payments, testing, security and releases. Took Nirshamti, a multi-tenant registration, payments and billing platform, from development to production; it serves ~11,500 users across several program operators. Builds daily with agentic AI (Claude Code) inside a disciplined process of written specs, test gates and code review, so AI speed does not lower quality. Former math teacher and CRM trainer.

Experience

Atomix Technologies - Full Stack Developer | Aug 2023 - Present

Nirshamti (nirshamti.com): registration, student management, payments and monthly billing for after-school program operators.

- Core developer of a multi-tenant platform built as four services (frontend, backend API, payments microservice, backoffice) serving ~11,500 parents, students, instructors and managers.
- Own the payments domain end to end: card-provider integration (Tranzila), recurring monthly charge runs, refunds, card replacement, contract-level discounts and the operator billing model, with money writes guarded against double charges.
- Introduced a testing discipline from zero: ~3,000 Vitest unit tests across the repos, a mandatory test per change, local pre-push gates, and 52 per-feature manual test maps.
- Led a security audit and remediation program (64 findings triaged, 23 critical): hardened authentication, removed sensitive fields from API responses, added rate limiting and HTTP hardening, and introduced a backend authorization layer rolled out in log-then-enforce mode.
- Performance and privacy: cut a course-picker payload from 2.2 MB to 25 KB, cut contract-PDF generation from a 30 s timeout to 22 ms with caching, and scoped every response and cache to the tenant.
- Replaced read-modify-write updates with atomic MongoDB operations across core models to eliminate lost updates under concurrent use.
- Run CI and releases: GitLab CI quality gates (tests, type checks, build), pipeline compute cut ~4-5x, ~20 production releases since August under a fixed deploy window, health endpoints and incident handling.
- Built Hebrew RTL management and reporting screens, a tri-lingual help layer, offline attendance marking with background sync, and scheduled parent notifications.
- Work directly with clients, a product manager, a designer and devops; write the spec before every build and review every change. Led two developers for about a year and screened candidates for a new hire.
- Daily agentic development with Claude Code: delegate implementation to cheaper models, keep architecture and review on the strongest model, and enforce specs, test maps and review gates.
- Earlier: developed an education web app integrated with radio-based embedded devices for alternative communication (MobX).

Stack & tools: React, Next.js, TypeScript, Node.js, Express, MongoDB, Mongoose, Ant Design, Tailwind, Vitest, Playwright, pm2, GitLab CI, Vercel

Independent Projects

- **Dabri** - AI voice conversation trainer (prototype; MVP rebuild in progress). Next.js, TypeScript, MongoDB, an abstracted AI-provider layer and a server-side speech pipeline (Whisper + OpenAI TTS).
- **Zero Boredom** - kids' activity PWA. Next.js, Tailwind, MongoDB on Vercel; anonymous analytics dashboard; piloted with local families.

Earlier Experience & Education

- Math Teacher, Rabin Middle School | 2019 - 2022 · CRM Implementation & Training, John Bryce | 2017 - 2018
- Full Stack Web Development, John Bryce Academy | 2022 - 2023 · B.Ed in Special Education & Mathematics, Gordon Academic College | 2017 - 2020
- **Languages:** Hebrew, English, Russian
